Download:<https://drive.google.com/drive/folders/1ScnhyMI84SXVjKyPISzFBYw3qkiIyJzE?usp=sharing>New QuestionNote: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.You have an Azure subscription that contains 10 virtual networks. The virtual networks are hosted in separate resource groups.Another administrator plans to create several network security groups (NSGs) in the subscription. You need to ensure that when an NSG is created, it automatically blocks TCP port 8080 between the virtual networks.Solution: You configure a custom policy definition, and then you assign the policy to the subscription.Does this meet the goal?A. YesB. NoAnswer: A Explanation:Resource policy definition used by Azure Policy enables you to establish conventions for resources in your organization by describing when the policy is enforced and what effect to take. By defining conventions, you can control costs and more easily manage your resources. References: <https://docs.microsoft.com/en-us/azure/azure-policy/policy-definition>New QuestionNote: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.You have an Azure subscription that contains 10 virtual networks. The virtual networks are hosted in separate resource groups.Another administrator plans to create several network security groups (NSGs) in the subscription.You need to ensure that when an NSG is created, it automatically blocks TCP port 8080 between the virtual networks.Solution: You create a resource lock, and then you assign the lock to the subscription.Does this meet the goal?A. YesB. NoAnswer: BExplanation:How can I freeze or lock my production/critical Azure resources from accidental deletion? There is way to do this with both ASM and ARM resources using Azure resource lock. References:

<https://blogs.msdn.microsoft.com/azureedu/2016/04/27/using-azure-resource-manager-policy-and-azure-lock-to-control-your-azure-resources/>New QuestionYou have an Azure Active Directory (Azure AD) domain that contains 5,000 user accounts.You create a new user account named AdminUser1.You need to assign the User administrator administrative role to AdminUser1.What should you do from the user account properties?A. From the Directory role blade, modify the directory role.B. From the Groups blade, invite the user account to a new group.C. From the Licenses blade, assign a new license.Answer: AExplanation:Assign a role to a userSign in to the Azure portal with an account that's a global admin or privileged role admin for the directory.Select Azure Active Directory, select Users, and then select a specific user from the list. For the selected user, select Directory role, select Add role, and then pick the appropriate admin roles from the Directory roles list, such as Conditional access administrator.Press Select to save.References:

<https://docs.microsoft.com/en-us/azure/active-directory/fundamentals/active-directory-users-assign-role-azure-portal>New QuestionYou have an Active Directory forest named contoso.com. You install and configure Azure AD Connect to use password hash synchronization as the single sign-on (SSO) method. Staging mode is enabled.You review the synchronization results and discover that the Synchronization Service Manager does not display any sync jobs.You need to ensure that the synchronization completes successfully.What should you do?A. From Synchronization Service Manager, run a full import.B. Run Azure AD Connect and set the SSO method to Pass-through Authentication.C. From Azure PowerShell, run Start-AdSyncSyncCycle -PolicyType Initial.D. Run Azure AD Connect and disable staging mode.Answer: DExplanation:Staging mode must be disabled. If the Azure AD Connect server is in staging mode, password hash synchronization is temporarily disabled.References:

<https://docs.microsoft.com/en-us/azure/active-directory/connect/active-directory-aadconnectsync-troubleshoot-password-has-h-synchronization#no-passwords-are-synchronized-troubleshoot-by-using-the-troubleshooting-task>New QuestionYou have an Azure Active Directory (Azure AD) tenant named contoso.onmicrosoft.com that contains 100 user accounts.You purchase 10 Azure AD Premium P2 licenses for the tenant. You need to ensure that 10 users can use all the Azure AD Premium features.What should you do?A. From the Groups blade of each user, invite the users to a group.B. From the Licenses blade of Azure AD, assign a license.C. From the Directory role blade of each user, modify the directory role.D. From the Azure AD domain, add an enterprise application.Answer: BExplanation:To assign a license, under Azure Active Directory > Licenses > All Products, select

one or more products, and then select Assign on the command bar. References:

<https://docs.microsoft.com/en-us/azure/active-directory/fundamentals/license-users-groups> New Question You download an Azure Resource Manager template based on an existing virtual machine. The template will be used to deploy 100 virtual machines. You need to modify the template to reference an administrative password. You must prevent the password from being stored in plain text. What should you create to store the password? A. Azure Active Directory (AD) Identity Protection and an Azure policy B. a Recovery Services vault and a backup policy C. an Azure Key Vault and an access policy D. an Azure Storage account and an access policy Answer: C Explanation: You can use a template that allows you to deploy a simple Windows VM by retrieving the password that is stored in a Key Vault. Therefore the password is never put in plain text in the template parameter file. References:

<https://azure.microsoft.com/en-us/resources/templates/101-vm-secure-password/> New Question Your company registers a domain name of contoso.com. You create an Azure DNS named contoso.com and then you add an A record to the zone for a host named www that has an IP address of 131.107.1.10. You discover that Internet hosts are unable to resolve www.contoso.com to the 131.107.1.10 IP address. You need to resolve the name resolution issue. Solution: You modify the name server at the domain register. Does this meet the goal? A. Yes B. No Answer: B New Question Your company registers a domain name of contoso.com. You create an Azure DNS named contoso.com and then you add an A record to the zone for a host named www that has an IP address of 131.107.1.10. You discover that Internet hosts are unable to resolve www.contoso.com to the 131.107.1.10 IP address. You need to resolve the name resolution issue. Solution: You add an NS record to the contoso.com zone. Does this meet the goal? A. Yes B. No Answer: A Explanation: Before you can delegate your DNS zone to Azure DNS, you need to know the name servers for your zone. The NS record set contains the names of the Azure DNS name servers assigned to the zone. References:

<https://docs.microsoft.com/en-us/azure/dns/dns-delegate-domain-azure-dns> New Question Your company registers a domain name of contoso.com. You create an Azure DNS named contoso.com and then you add an A record to the zone for a host named www that has an IP address of 131.107.1.10. You discover that Internet hosts are unable to resolve www.contoso.com to the 131.107.1.10 IP address. You need to resolve the name resolution issue. Solution: You modify the SOA record in the contoso.com zone. Does this meet the goal? A. Yes B. No Answer: B Explanation: Modify the NS record, not the SOA record. Note: The SOA record stores information about the name of the server that supplied the data for the zone; the administrator of the zone; the current version of the data file; the number of seconds a secondary name server should wait before checking for updates; the number of seconds a secondary name server should wait before retrying a failed zone transfer; the maximum number of seconds that a secondary name server can use data before it must either be refreshed or expire; and a default number of seconds for the time-to-live file on resource records. Question Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. You have an Azure subscription named Subscription1. Subscription1 contains a resource group named RG1. RG1 contains resources that were deployed by using templates. You need to view the date and time when the resources were created in RG1. Solution: From the RG1 blade, you click Automation script. Does this meet the goal? A. Yes B. No Answer: B New Question Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. You have an Azure virtual machine named VM1. VM1 was deployed by using a custom Azure Resource Manager template named ARM1.json. You receive a notification that VM1 will be affected by maintenance. You need to move VM1 to a different host immediately. Solution: From the Overview blade, you move the virtual machine to a different resource group. Does this meet the goal? A. Yes B. No Answer: B !!!RECOMMEND!!!
